PROFILE SUMMARY

AI-Native Full-Stack Developer with an MCA degree, focused on building web and mobile applications using AI-powered development tools. Skilled in React, TypeScript, Python, Django, REST APIs, MySQL, and application deployment, with hands-on project experience in end-to-end application development and integration.

EXPERIENCE

Software Developer **Jan 2026 – Current**

Zan Computech Inc – Tidel Park, Coimbatore

ZanCRM AI-Native Customer Relationship Management System

Technologies: React 19, TypeScript, Vite, Tailwind CSS, Python, Django, MySQL, REST APIs, Git, GitHub

- Developing a full-stack CRM application for managing sales activities and business operations at ZanCompute.
- Building modules for customer management, sales pipeline, deals, proposals, tasks, reminders, and activity tracking.
- Designing operations workflows for project management, installer scheduling, device inventory, bookings, and installation tracking.
- Integrating frontend interfaces with backend REST APIs and ClickHouse database services.
- Leveraging AI-powered development tools for code generation, debugging, UI development, and development workflow optimization.
- Working on application testing, Git-based version control, and deployment configuration.

ZAN Configuration & Device Monitoring Dashboard

Tech Stack: React.js, JavaScript, HTML, CSS, Python (Flask), MySQL, REST APIs

- Designed and developed a responsive React.js Configuration Management Dashboard with dynamic forms, live validation, and reusable UI components.
- Implemented efficient state management and conditional rendering to support scalable, rule-based configuration workflows.
- Integrated the frontend with Flask REST APIs to perform secure CRUD operations for client, system, and configuration data.
- Built dynamic tables and form-driven records, enabling administrators to create, edit, and manage client configurations directly from the UI.
- Developed backend logic to auto-create client-specific MySQL tables and persist structured data in the ZANConfig database.
- Integrated real-time device monitoring, displaying device status and last-updated metrics from backend services.
- Optimized performance through clean architecture, optimized rendering, and reduced redundant API calls, improving overall usability and efficiency.

PROJECTS

INTEGRATED HEALTH INSURANCE MANAGEMENT AND ACCESS PORTAL

TechStack - HTML5, CSS, JavaScript,React.js,Python,MySQL,

- To develop a web-based Health Insurance Gateway that simplifies the management of policies,claims, and coverage for users.
- Users can register, manage insurance policies, submit claims, and track their claim status and policy coverage online.
- Designed using HTML, CSS, and JavaScript to ensure a responsive, smooth, and user-friendly experience.
- Developed with Python, integrated with a MySQL database for secure storage and management of user, policy, and claim data.
- Provides an efficient, secure, and accessible platform for users to manage all aspects of their health insurance digitally

EDUCATION

Master of Computer Applications (MCA) **2023-2025**
Karpagam University
CGPA -8.8

Bachelor of Computer Applications (BCA) **2018-2021**
Nehru Arts and Science College
CGPA -7.9

TECHNICAL SKILLS

- **AI-Native Development:** AI-assisted coding, debugging, and automation
- **Frontend:** React.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
- **Mobile:** Ionic, Angular, Capacitor
- **Backend:** Python, Django, Flask, REST APIs
- **Database:** MySQL, ClickHouse, SQL
- **Deployment & DevOps:** Linux, Render, Netlify, Nginx, Docker, Git, GitHub
- **Tools:** VS Code, Postman
